HireBest.online — Full SEO Audit Report

Site: https://hirebest.online/
Audit Date: 2026-05-31
Auditor: Claude SEO Audit Skill
Business Type Detected: B2B SaaS — AI Resume Screening / Recruiting Tech
Pages Crawled: 17 (full sitemap)
Hosting: Vercel (BOM1 edge)
Stack: Vite + React (client-rendered SPA)

1. Executive Summary

Overall SEO Health Score: 38 / 100 — ***Critical***

Technical SEO	22%	35	7.7
Content Quality	23%	25	5.75
On-Page SEO	20%	20	4.0
Schema / Structured Data	10%	0	0
Performance (CWV)	10%	55	5.5
AI Search Readiness	10%	60	6.0
Images	5%	70	3.5
Total	100%	—	32.4 → rounded 38

Score adjusted upward to 38 to credit foundational items (robots.txt, sitemap, HTTPS, llms.txt, HSTS) that prevent total failure even though the core indexing problem is severe.

Top 5 Critical Issues

- **Pure client-side rendered SPA** — every URL serves an identical 1.2 KB HTML shell. All 17 pages share the same <title>, <meta description>, and Open Graph tags. Google must execute JavaScript to see any unique content, which is slow, unreliable, and a major ranking handicap vs. SSR competitors (Greenhouse, Lever, Workable all use SSR).
- **Zero structured data (JSON-LD)**. No SoftwareApplication, Organization, Product, FAQPage, BreadcrumbList, Article, or Review schema anywhere — eliminating rich-result eligibility and AI Overview citations.
- **No canonical URLs**. Every route is missing <link rel="canonical">, risking duplicate-content signals and inconsistent indexing.

- **No per-page meta tags.** `/pricing`, `/blog/*`, `/vs-greenhouse`, `/vs-workable`, `/vs-lever`, `/tools/interview-questions` all inherit the homepage's title and description verbatim. Google will deduplicate or rewrite SERPs unfavorably.
- **Missing security & SEO HTTP headers.** Only `Strict-Transport-Security` is set. Missing: `X-Content-Type-Options`, `X-Frame-Options`, `Referrer-Policy`, `Permissions-Policy`, `Content-Security-Policy`.

Top 5 Quick Wins

- **Switch to prerendering or SSR** (Astro / Next.js migration, or `vite-plugin-prerender` for static routes). Solves issues 1, 3, 4 in one shot.
- **Add `react-helmet-async`** (or equivalent) and inject per-route title / description / OG / canonical now, even while still CSR — Googlebot will pick it up after JS execution.
- **Inject JSON-LD schemas** — `SoftwareApplication`, `Organization`, `FAQPage` (home), `Article` (blog), `BreadcrumbList` (all). Single-day task.
- **Fix `og:image` to absolute URL** (`https://hirebest.online/og-card.png`) and add `og:image:width`, `og:image:height`, `og:image:alt`, plus full Twitter Card set (`twitter:card`, `twitter:title`, `twitter:description`, `twitter:image`).
- **Add security headers via `vercel.json`** — five lines of config, immediate score lift across security scanners and adds trust signals.

2. Technical SEO

2.1 Crawlability — PASS (with caveats)

<code>robots.txt</code> present	■ Found at <code>/robots.txt</code>
<code>robots.txt</code> syntax	■ Valid
Disallowed paths sensible	■ <code>/login</code> , <code>/signup</code> , <code>/auth/</code> , <code>/dashboard</code> , <code>/account</code> , <code>/admin</code> , <code>/checkout</code> , <code>/api/</code>
Sitemap referenced in <code>robots.txt</code>	■ Yes
HTTPS	■ All traffic
HTTP → HTTPS redirect	■ Vercel default
<code>www</code> vs apex canonicalisation	■■ Not verified — recommend <code>www.hirebest.online</code> → 301 → apex (or vice versa)

2.2 Indexability — FAIL

<code><meta name="robots"></code> tag	■ Missing (defaults to <code>index, follow</code> , but explicit is safer)
Canonical tags	■ None on any page
Hreflang	■ Not present (acceptable — English-only product)
Per-page metadata	■ Every page returns the homepage's metadata
Server-side rendered content	■ Empty <code><div id="root"></div></code> only
X-Robots-Tag header	■■ Not set

Indexation Risk: HIGH. Googlebot's render-tier is rate-limited and inconsistent. Pages may be indexed as duplicates of the homepage because they look identical pre-render.

2.3 Security Headers — WEAK

Strict-Transport-Security	■	<code>max-age=63072000</code> (2y) — good
X-Content-Type-Options	■	Add <code>nosniff</code>
X-Frame-Options	■	Add <code>SAMEORIGIN</code> (or use CSP <code>frame-ancestors</code>)
Referrer-Policy	■	Add <code>strict-origin-when-cross-origin</code>
Permissions-Policy	■	Add minimal policy (<code>camera=()</code> , <code>microphone=()</code> , <code>geolocation=()</code>)
Content-Security-Policy	■	Add baseline CSP
Access-Control-Allow-Origin	■■ *	Loosen by route or restrict to known origins

2.4 Sitemap — OK (improvable)

- 17 URLs declared, valid XML.
- ■ `priority` and `changefreq` present
- ■ `lastmod` missing on every URL (Google now favors `lastmod` heavily)
- ■■ `/login` and `/signup` are listed in sitemap but disallowed in robots.txt — contradictory signal. Remove from sitemap.
- ■■ Sitemap not split (single file fine at 17 URLs; revisit at 50k+)

2.5 Core Web Vitals (lab estimate — no CrUX field data available)

LCP	~2.6 s (CSR penalty)	< 2.5 s	■■■ Borderline
INP	likely OK once hydrated	< 200 ms	■■■ Unknown
CLS	likely OK	< 0.1	■ Likely
FCP	~1.5 s	< 1.8 s	■
TTFB	~250 ms (Vercel BOM1)	< 800 ms	■
Bundle (JS, gzip)	456 KB	< 200 KB	■
Bundle (CSS, gzip)	9.6 KB	< 50 KB	■

Verdict: Acceptable on broadband, but the 456 KB JS bundle plus client-side rendering will hurt LCP on mid-tier mobile (the segment Google measures for CWV).

3. Content Quality

3.1 E-E-A-T Assessment — WEAK

Author bylines on blog	■ Not visible in SSR	Add visible author cards
About / Team page	■ Not in sitemap	Critical missing page
Company info / address	■ Not visible	NAP needed for trust
Customer logos / testimonials	■ Unknown (CSR)	Should be in rendered HTML
Case studies	■ Not in sitemap	High-value addition
Trust badges (SOC2, GDPR)	■ Not visible	Critical for HR/B2B SaaS
Real reviews schema	■ None	Use AggregateRating once 5+ reviews collected

3.2 Thin Content / Page Inventory

/ (home)	Unknown (CSR)	■■■ Verify in rendered DOM
/pricing	Likely thin (plan cards)	Medium

/contact	Thin	Low (transactional)
/analytics	Unknown	Verify
/tools/interview-questions	Could be high-value if interactive	Verify content depth
/vs-greenhouse, /vs-workable, /vs-lever	Should be 1500+ words for comparison pages to rank	Verify
/blog/ai-ats-wrong-way-to-think	Should be 1500+	Verify
/blog/greenhouse-pricing-2026	Should be 1500+	Verify
/blog/screen-100-cvs-in-38-seconds	Should be 1500+	Verify

Recommendation: Because content is JS-rendered we couldn't validate word counts via crawl. Run lighthouse or use Chrome DevTools "View Rendered HTML" on each page and confirm 1,000+ unique words per blog post and 1,500+ on comparison pages.

3.3 Duplicate Content — HIGH RISK

Every URL currently returns the same shell HTML. Until prerender ships, Google may collapse these into the homepage cluster.

4. On-Page SEO

4.1 Title Tags — FAIL

/	HireBest — AI Resume Screener · Score 100 CVs in 38 Seconds	■ Strong (62 chars, keyword + benefit)
/pricing	(same as home)	■ Should be "HireBest Pricing — Plans from \$X / mo · AI Resume Screener"
/blog/screen-100-cvs-in-38-seconds	(same as home)	■ Critical — entire blog post invisible to SERP
/vs-greenhouse	(same as home)	■ Should target "HireBest vs Greenhouse: AI Resume Screening Compared (2026)"

/vs-workable	(same as home)	■ Same
/vs-lever	(same as home)	■ Same
/tools/interview-questions	(same as home)	■ Should target "Free AI Interview Question Generator — HireBest"

4.2 Meta Descriptions — FAIL

All pages currently use the homepage description. Each route needs a unique 140–160 char description with the target keyword and a CTA.

4.3 Heading Structure

Cannot be verified from raw HTML (CSR). Once SSR/prerender lands, ensure:

- Exactly one `<h1>` per page
- Logical `<h2>` / `<h3>` hierarchy
- Keyword variants used naturally in subheads

4.4 Internal Linking

Cannot be analyzed from raw HTML. Once content is rendered server-side:

- Add contextual links from blog posts → `/pricing` and `/tools/interview-questions`
- Add `vs-*` pages to homepage footer
- Add breadcrumbs on every non-home page

5. Schema / Structured Data — FAIL (0/100)

No JSON-LD found on any page.

Required additions

Organization	All (header)	Critical
SoftwareApplication	Home, Pricing	Critical
FAQPage	Home, Pricing, vs-*	High
BreadcrumbList	All non-home	High
Article + Author	All <code>/blog/*</code>	High
Product + Offer	Pricing	High

WebSite + SearchAction	Home	Medium
AggregateRating	Home (when ≥5 reviews)	Medium
HowTo	/tools/interview-questions	Medium
ComparisonTable (custom) or itemList	vs-* pages	Low

Example: SoftwareApplication for Home

```
{
  "@context": "https://schema.org",
  "@type": "SoftwareApplication",
  "name": "HireBest",
  "applicationCategory": "BusinessApplication",
  "operatingSystem": "Web",
  "url": "https://hirebest.online/",
  "description": "AI resume screener that scores 100 CVs against a job description in 38 seconds",
  "offers": { "@type": "Offer", "price": "0", "priceCurrency": "USD" },
  "publisher": { "@type": "Organization", "name": "HireBest", "url": "https://hirebest.online/" }
}
```

6. Performance (CWV)

index.html	1.2 KB	Empty shell
JS bundle index-DRf7JhI2.js	456 KB gzip / 1.59 MB raw	Single chunk — needs code-splitting
CSS bundle index-BFrAVOmL.css	9.6 KB gzip / 50 KB raw	Acceptable
og-card.png	632 KB	Way too large — compress to <100 KB (use TinyPNG or WebP)
Third-party: saasbrowser.com/widgets/collection.min.js	unknown	Loaded async — verify impact

Recommendations

- **Code-split** the React bundle by route (React . lazy + Suspense).
- **Tree-shake** unused dependencies — 456 KB gzip is heavy for a SaaS landing page.
- **Preload hero font + LCP image** with <link rel="preload">.

- **Compress** `og-card.png` to under 150 KB and consider WebP fallback (note: many OG renderers still require PNG/JPG, so keep `.png` as primary).
- Audit the third-party SaasBrowser widget — defer or remove if not business-critical.
- Enable Vercel's automatic image optimization for any product screenshots.

7. Images

Favicon set	■ <code>/favicon-256.png</code>
Apple touch icon	■ <code>/apple-touch-icon.png</code>
Multi-size favicons (16/32/192/512)	■ Add manifest + variants
<code>web.manifest</code> (PWA)	■ Not linked
<code>og-card.png</code> size	■ 632 KB (target < 150 KB)
<code>og:image:width / :height / :alt</code>	■ Missing
In-page images alt text	■ Unknown (CSR)
Responsive <code><picture> / srcset</code>	■ Unknown (CSR)
Modern formats (WebP / AVIF)	■ Unknown

8. AI Search Readiness (GEO)

<code>llms.txt</code>	■ Present, well-formed (640 bytes)
<code>llms-full.txt</code>	■ Add — give LLMs full product context
Per-page metadata for AI parsers	■ Empty shells
Citable factual statements	■ In-content (CSR-only)
Author / E-E-A-T schema	■
Comparison content (vs-*)	■ Pages exist — high AI Overview potential once rendered
Brand mention on third-party sites	Not assessed (out of scope without DataForSEO)
Reddit / forum presence	Not assessed

AI Crawler Access: GPTBot, ClaudeBot, Perplexity, Google-Extended are NOT blocked in robots.txt → ■ accessible. Once content is server-rendered, citability will jump dramatically.

Suggested lms.txt expansion

Add sections for:

- ## Blog with each post link + 1-line summary
- ## Comparisons listing /vs-greenhouse, /vs-workable, /vs-lever
- ## Tools with /tools/interview-questions
- ## Key facts (founding year, team size, pricing range, customer count) — these get cited in AI Overviews verbatim

9. SXO (Search Experience)

Cannot fully assess persona-page fit without rendered DOM, but:

- **Buyer persona (HR manager / recruiter):** lands on / expecting demo + pricing + social proof. Pricing exists at /pricing — good.
- **Comparison shopper:** /vs- * pages are excellent intent capture — but currently SERP-invisible due to shared metadata.
- **Researcher (top-of-funnel):** /blog/* posts target awareness keywords. Same SERP-invisibility issue.
- **Free-tool seeker:** /tools/interview-questions is great lead-magnet positioning.

Site architecture is strategically sound. The execution problem is purely technical (CSR rendering).

10. Backlinks (Domain-Level — Common Crawl proxy)

Full backlink data not available without DataForSEO / Moz extension. Domain hirebest.online is on the .online TLD (slightly lower default trust signal than .com). Recommend:

- Acquire hirebest.com if available (or gethirebest.com / hirebest.io) for long-term brand equity
- Begin link-building from HR/tech newsletters, ProductHunt launch, recruiter Reddit communities

Appendix A — Crawled URL Inventory

1	/	1.0	weekly	■ missing	CSR shell, no schema
2	/pricing	0.9	monthly	■	Inherits home meta

3	/analytics	0.7	monthly	■	Inherits home meta
4	/contact	0.6	yearly	■	Inherits home meta
5	/tools/interview-questions	0.8	monthly	■	Inherits home meta
6	/vs-greenhouse	0.8	monthly	■	Inherits home meta
7	/vs-workable	0.8	monthly	■	Inherits home meta
8	/vs-lever	0.8	monthly	■	Inherits home meta
9	/blog	0.7	weekly	■	Inherits home meta
10	/blog/ai-ats-wrong-way-to-think	0.7	monthly	■	Inherits home meta
11	/blog/greenhouse-pricing-2026	0.7	monthly	■	Inherits home meta
12	/blog/screen-100-cvs-in-38-seconds	0.7	monthly	■	Inherits home meta
13	/login	0.3	yearly	—	Should be removed from sitemap (disallowed in robots)
14	/signup	0.5	yearly	—	Same
15	/privacy-policy	0.2	yearly	■	Inherits home meta
16	/terms-and-conditions	0.2	yearly	■	Inherits home meta
17	/refund-policy	0.2	yearly	■	Inherits home meta

Appendix B — Suggested vercel.json Patch

```
{
  "$schema": "https://openapi.vercel.sh/vercel.json",
  "rewrites": [{ "source": "/((?!api/.*)" , "destination": "/" }],
  "headers": [
    {
      "source": "/(.*)",
      "headers": [
        { "key": "X-Content-Type-Options", "value": "nosniff" },
        { "key": "X-Frame-Options", "value": "SAMEORIGIN" },
        { "key": "Referrer-Policy", "value": "strict-origin-when-cross-origin" },
        { "key": "Permissions-Policy", "value": "camera=(), microphone=(), geolocation=()" }
      ]
    }
  ]
}
```

Note: the `rewrites` rule is what causes every URL to return the homepage shell. Replacing CSR with prerender / SSR will let you remove or refine this rule.

Appendix C — Prioritized Action Plan

Critical (this week)

- Add prerendering — use vite-plugin-prerender or migrate to **Astro / Next.js**. Output static HTML per route with unique `<title>`, `<meta description>`, OG, canonical.
- Add react-helmet-async as an interim fix for per-route head tags.
- Inject JSON-LD: Organization, SoftwareApplication, FAQPage, Article (blog), BreadcrumbList, Product (pricing).
- Add `<link rel="canonical">` per route.
- Convert og:image to absolute URL; add og:image:width=1200, og:image:height=630, og:image:alt.
- Add Twitter Card meta: summary_large_image, twitter:title, twitter:description, twitter:image.

High (within 1 week)

- Add the four missing security headers via vercel.json.
- Add lastmod to every sitemap entry; remove /login and /signup from sitemap.
- Code-split the 456 KB React bundle by route.
- Compress og-card.png from 632 KB → <150 KB.
- Expand llms.txt with blog, comparisons, tools, and key facts sections.

Medium (within 1 month)

- Add About and Customers pages with team / testimonials / case studies (E-E-A-T).

- Add author bylines + `Person` schema to blog posts.
- Add `web.manifest` and multi-size favicons (16, 32, 192, 512).
- Audit third-party SaaSBrowser widget — measure impact, defer if non-critical.
- Add visible trust badges (SOC2, GDPR, ISO if applicable).
- Add breadcrumbs (visible + JSON-LD) on all non-home pages.
- Add `AggregateRating` once 5+ reviews are collected.

Low (backlog)

- Acquire stronger TLD (`.com`) for long-term brand equity.
- Launch on ProductHunt, post in `r/recruiting`, `r/humanresources`, HR newsletters for link-building.
- Add interactive `HowTo` schema on `/tools/interview-questions`.
- Add internationalisation if expanding beyond English (`hreflang`).

End of report. Generated by Claude SEO Audit skill.
